

Company offers simple solution to help solve 911 dispatcher shortage problem

IRVINE, CA—At a time when our nation is facing a critical 911 dispatcher shortage, StreamQuik's 'QuikHelp' emergency-notification solution makes it easy to send alerts for help to local responders DIRECTLY without needing to involve 911 dispatchers.

With the simple click or tap of a button from any desktop computer, laptop, tablet or smartphone, incident alerts can be quickly sent to and viewed by local responder agen-

cies using a simple browser without having to install any special hardware, software or apps, anywhere.

Because QuikHelp makes it possible to send alerts for help directly to responder agencies, the delays and other issues frequently encountered when calling 911 are also eliminated.

Each alert tells responders exactly where a person is located—even inside of a building—so that rescuers don't have to waste time searching for people when every second counts. Alerts can also be delivered to responder vehicles and shared with other agencies to provide more timely information without having to wait for it to be relayed to them when timing is critical. A mobile update-on-the-fly feature also makes it easy to provide responders with ongoing updates directly as the incident is unfolding.

To view a live demo right over the phone from within your browser and to learn more about how Fusion has transformed the incident-notification process, please contact StreamQuik above.
